### About

After exploring London for over ten years, I now live in Bristol and work in a hybrid remote environment. I spend my days solving problems by creating software and hardware solutions using a wide range of technologies.

I've worked with companies in the UK, Europe and the US, built several enterprise-level products both as an engineering manager and individual contributor, and ideated, architected and implemented systems and processes as a technical consultant and project lead.

In my next role I hope to find an ethically-minded company with exciting challenges, continue to cultivate my technological knowledge, and work with an exceptional and welcoming team.

### Core Technologies

TypeScript JavaScript ES.Next Babel

React React Native Redux Webpack

Next.js GraphQL Apollo NestJS

Node.js Express Koa Fastify

Jest Mocha Chai Sinon

Terraform Docker AWS Azure

Postgres MongoDB Mongoose Cosmos

Ruby Rails RSpec Capybara

Python TensorFlow OpenCV

### Hobbies

### Experience

#### SAPI Group

Principal Engineer

June 2022 to Present

I joined SAPI as a Principal Engineer to oversee the creation of a brand new product offering for the company. I was responsible for architecture, technical approach and hiring and training new staff. During my time with the company we grew from a single permanent developer to a large cross-functional team.

#### Curve

Tech Lead

Nov 2021 to June 2022

I joined Curve as a Tech Lead to manage their Credit Web initiative. During my time at Curve, I had the opportunity to immerse myself in the company and work with Product and the company directors to create a proof-of-concept for a groundbreaking application infrastructure.

#### Deyvce

Principal Engineer

June 2020 to Nov 2021

Principal Engineer at a disruptive telecoms technology start-up based in London. I was responsible for the development of: the Enterprise and Customer Support web portals, written in TypeScript and React; the iOS and Android apps, written in Swift and Kotlin respectively; and several key backend systems and services written using a variety of languages and cloud technologies. I was a key member of the core team that took the product from the early ideation and product design phase through to a fully-featured, highly-stable and profitable customer offering.

#### Futurice

Tech Lead

January 2019 to June 2021

Technical Lead for an international digital consultancy based in London and specialising in product design and development. I pride myself on my pragmatic, technology-agnostic approach to software engineering and strive to strike an ideal balance of idiomatic, tried-and-tested best practices and exciting new technologies.

#### Antiblanks

Development Lead

April 2016 to December 2018

Development Team Lead for a software house providing web experiences using React for prominent clients including the largest department store in South America and a financial trust with over \$10 billion in assets.
